How to make your phone close out of your previous web searches on Safari to improve Bluetooth connection, phone speed, and phone battery life

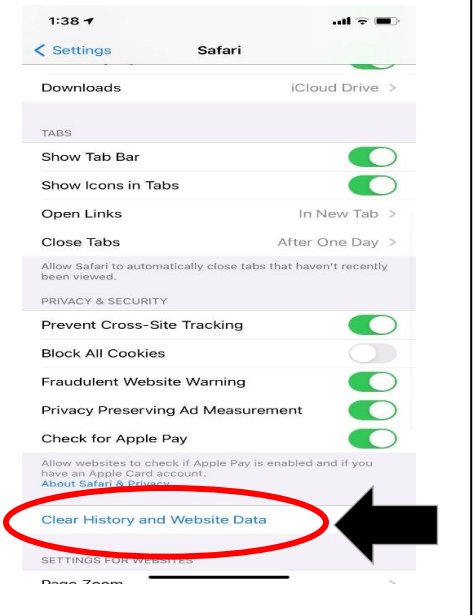

## Step 1: Go to Settings

## Step 2: Scroll down and hit Safari

## Step 3: Clear your history of web searches (instead of pushing "X" to close each search individually)

## Step 4: Hit Close Tabs and change from "manually" to "after one day". This will close your searches daily for you!
